

What is claimed is:

1. A mailbox with lighting decorative structure, comprising lighting fixing structures and lighting board structures, wherein:

— the lighting board structure consists of combined lighting board and connecting board, on a surface of the lighting board is cut with letter font or pattern with a specified depth, an optical fiber filament being inserted inside the panel of the lighting board, the optical fiber filament being connected with the connecting board, a lighting unit being installed at the center of the connecting board connected to a lower part of the lighting board;

— the lighting fixing structure consists of a fixing main unit, an upper cover and a receptor unit, wherein a round head is installed on the top side of the upper cover, a receptor head is installed on a lower part of the receptor unit, wherein the lighting board structure is inserted between the upper cover, the receptor unit and the fixing main unit, a lighting structure with different letter font is inserted inside the lighting fixing structure, the lighting fixing structure is fixed onto an upper part or a side face of a mailbox, and connected to a solar energy board to make a practical product.

2. A mailbox with lighting decorative structure, comprised of a lighting fixing structure and a lighting board structure, wherein:

— the lighting board consists of a bottom plate and a film, wherein the membrane is cut with different letter font and glued to the bottom plate;

— the lighting fixing board consists of a fixing plate, an optical fiber fabric and a fixing frame, forming a structure having three layers, the fixing frame having a specified number of fixing end faces; wherein, the lighting board is inserted and fixed between fixing end faces, the lighting fixing structure being fixed onto an upper part or a side face of the mailbox, each end thereof being fitted with a lighting unit providing guide light to the optical fiber fabric, and connected with a solar energy board to make a practical product.

3. A mailbox with lighting decorative structure, comprised of a lighting fixing

structure and a lighting board structure, wherein:

— the lighting board structure consists of a bottom plate, an optical fiber fabric, an upper plywood and a membrane, wherein the film is cut with a letter font or a pattern,

5 — the lighting fixing structure: on the fixing main unit has installed a specified number of fixing end faces, between two fixing end faces being inserted a lighting board structure, on a lower part of the lighting fixing structure being provided with a specified number of holes serving to accommodate the insertion of the lighting unit, on a lower part of the lighting fixing structure is
10 installed a base, the lighting fixing structure is fixed to an upper part or a side face of the mailbox, on a lower part of the lighting fixing structure is installed a specified number of lighting units, and it is connected to a solar energy board to make a practical product.
